

CSE 215L: Programming language II Lab

Faculty: Dr. Ziaul Hossain (ZHo)

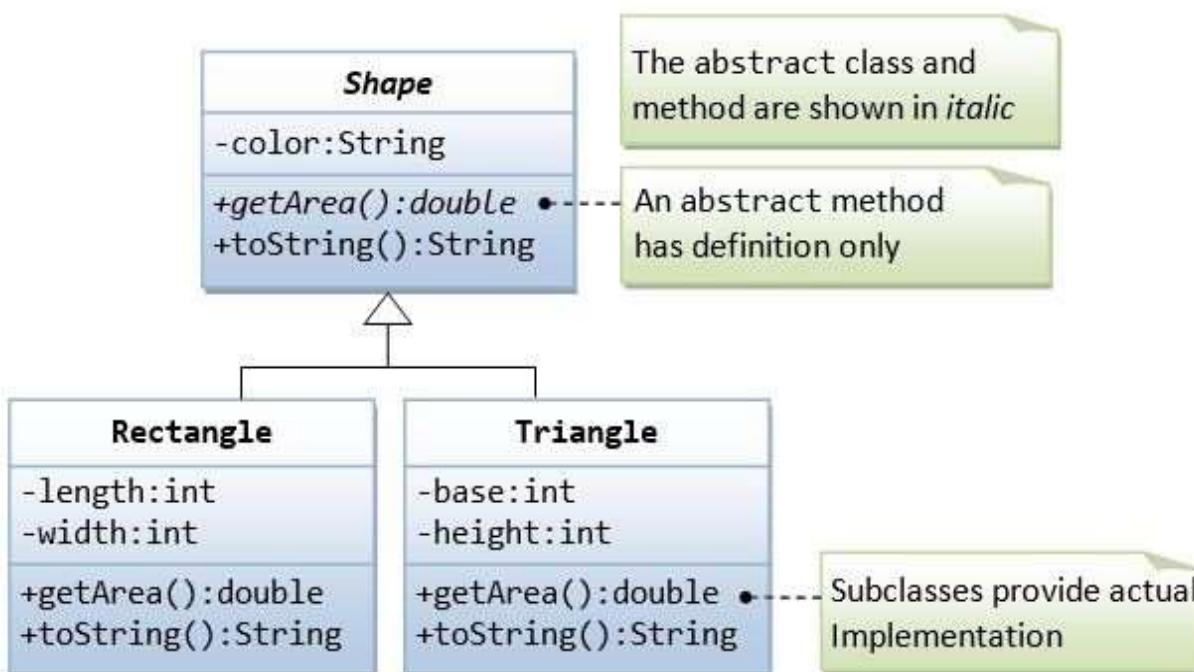

Sec: 06

Lab - 10 [Abstract Class], Spring-2021

Lab Instructor: Salsavil Kayyum

Objective:

- To learn about abstract class
- To design and use an abstract class

An abstract method is a method with only signature (i.e., the method name, the list of arguments, and the return type) without an implementation (i.e., the method's body). You use the keyword `abstract` to declare an abstract method.

Implementation of these methods is NOT possible in the **Shape** class, as the actual shape is not yet known. (How to compute the area if the shape is not known?) Implementation of these abstract methods will be provided later once the actual shape is known. These abstract methods cannot be invoked because they have no implementation.

Task: Implement the following classes and test their methods.

/* THE UML CLASS DIAGRAM IS GIVEN ON THE NEXT PAGE */
